

About this course

A Certified Energy Manager (CEM) training course has been designed with the aim of preparing energy managers for the management, monitoring, and reporting of sustainable energy management systems (SEMS) recognized under the Asean Energy Management System (AEMAS). In this professional certification program, participants will gain in-depth knowledge of sustainable energy management, energy efficiency, and cost reduction.

The Malaysian Parliament has recently endorsed the Energy Efficiency Conservation Act (EECA). Consequently, this marks the last chance to apply for the Registered Electrical Energy Manager (REEM), eligible for conversion to Registered Energy Manager (REM) Type 1 under the new act.
